TOY GUIDE: 3-6mos

PLAYFUL MOVEMENTS WITH KATIE AND KELSEY

Activity Cube		The activity cube offers five interactive sides featuring light-up buttons, spinners, and instruments, making it a highly engaging toy for babies. It's particularly popular for encouraging prop sitting as babies approach six months of age. The cube's design captivates attention, while the buttons and spinners stimulate cause-and-effect learning, enhancing cognitive and motor development.
Suction cup spinners		The spinners are designed to enhance a baby's gross motor skills through activities such as reaching, shaking, and attaching the suction cups to various surfaces like tables, windows, and mirrors. This play also promotes coordination for spinning and, when babies work on removing the suction cup, it helps build upper body strength and core stability.
Sassy Wonder wheel		The activity strengthens a baby's ability to pull the wheel off the suction, enhances coordination as they spin the wheel, and supports cognitive development by reinforcing cause-and-effect relationships.
Piggy bank		The coins help little ones develop grasping skills, encourage banging them together—a key developmental milestone—and are often used for sensory exploration through chewing. For older children, it promotes coordination as they work to place the coin in the slot and also strengthens reaching skills.
Bright Starts Drum		This drum encourages tummy time engagement with its captivating light-up colors. Pressing the buttons triggers visual and auditory responses, such as fun animal sounds or drum beats, promoting cause-and-effect learning. It supports coordination and keeps children engaged from any position, making it an excellent tool for developmental play.
O-ball		This ball is designed to be easy for little ones to catch and control during play. Its unique configuration makes it simple to grasp, encouraging independent handling. The small rattles inside promote cause-and-effect learning, providing auditory feedback whenever the ball is shaken, enhancing sensory and cognitive development.
Baby Einstein Light Bar		The light bar features vibrant colors, musical tones, and animal sounds activated by button presses, helping to develop a child's coordination skills. Spinning the rattle in the center triggers a song, adding an extra layer of interactive play. With a prop-up option for tummy time or sitting, it serves as a motivational tool to support gross motor skill development.
Take along musical toy		This portable toy supports coordination skills through interactive play. It encourages cause-and-effect learning with button pressing, features a rattle for auditory stimulation, and provides visual feedback with engaging light-up colors, making it an excellent all-in-one sensory toy.
